

Erratum

In the March 2003 issue of the *Journal*, the article entitled, “Accumulation of Mitochondrial DNA Mutations in Human Immunodeficiency Virus–Infected Patients Treated with Nucleoside-Analogue Reverse-Transcriptase Inhibitors,” by Martin et al. (72:549–560), the heteroplasmic nucleotide positions in tables 2, 3, 4, and

5 refer to the corresponding nucleotide in the mitochondrion sequence in GenBank accession number NC_001807 and not to the revised Cambridge sequence, as stated in the legends to the tables and within the Electronic-Database Information section. The authors regret the error.
